Professional Summary

Senior Cloud & DevOps Engineer specializing in scalable AWS cloud infrastructure, Kubernetes orchestration, Infrastructure as Code with Terraform, and zero-downtime CI/CD deployment pipelines.

Technical Skills

AWS, Docker, Kubernetes, Linux, Terraform, CI/CD, Bash, Infrastructure as Code, Azure, Microservices, Prometheus, Grafana, Git, Networking, IAM

Work Experience

Cloud Infrastructure Engineer - CloudScale Systems (2022 - Present)
- Architected multi-region AWS cloud environments using Terraform Infrastructure as Code (IaC), decreasing provisioning times by 65%.
- Administered Kubernetes clusters hosting 40+ microservices with 99.99% uptime availability.
- Automated CI/CD deployment pipelines utilizing Git and Bash scripting, shortening release cycles from bi-weekly to daily.

Linux Systems Administrator - Enterprise Cloud Net (2020 - 2022)
- Managed 120+ Red Hat Linux enterprise servers; configured IAM security roles and automated backup operations.
- Implemented system observability monitoring using Prometheus and Grafana dashboards for proactive alerting.

Key Projects

Multi-Cluster Kubernetes Deployment Platform
Technologies: Kubernetes, Docker, AWS, Terraform, CI/CD
- Deployed highly resilient container infrastructure with auto-scaling policies handling 25,000 requests per second.
- Secured infrastructure against vulnerabilities according to CIS benchmark standards.

Automated Disaster Recovery Infrastructure
Technologies: AWS, Terraform, Bash, Linux
- Scripted failover routines reducing Recovery Time Objective (RTO) from 4 hours to 12 minutes.

Education

Bachelor of Science in Computer Engineering
California State University, Long Beach (2016 - 2020)
