Professional Summary

Senior Cloud & DevOps Engineer specializing in scalable AWS cloud infrastructure architecture, Kubernetes container orchestration, Infrastructure as Code with Terraform, and zero-downtime automated CI/CD deployment pipelines. Experienced in managing Linux enterprise environments, designing fault-tolerant distributed networks, and implementing robust observability metrics using Prometheus and Grafana. Passionate about automated governance, cloud security compliance, and microservices scalability.

Technical Skills

AWS, Docker, Kubernetes, Linux, Terraform, CI/CD, Bash, Infrastructure as Code, Azure, Microservices, Prometheus, Grafana, Git, Networking, IAM, CloudFormation, Ansible, Python, System Administration

Work Experience

Senior Cloud Infrastructure Engineer - CloudScale Systems (2022 - Present)
- Architected and automated multi-region AWS cloud infrastructure using Terraform Infrastructure as Code (IaC), decreasing environment provisioning turnaround from 3 days to 25 minutes.
- Administered production Kubernetes (EKS) clusters hosting 60+ microservices handling 45,000 requests per second with 99.99% system availability.
- Built fully automated CI/CD deployment pipelines with Git and Bash, shortening sprint deployment cycles from bi-weekly releases to continuous daily deployments.
- Implemented enterprise IAM security baselines and role-based policies, achieving 100% compliance with SOC2 and CIS benchmark standards.

Linux Systems Administrator - Enterprise Cloud Net (2020 - 2022)
- Managed and maintained 150+ Red Hat Enterprise Linux (RHEL) server instances, configuring automated OS patching, system hardening, and storage backups.
- Deployed comprehensive infrastructure observability monitoring using Prometheus and Grafana, reducing Mean Time to Resolution (MTTR) by 45%.
- Scripted automated diagnostic routines using Bash and Python to detect server memory leaks and proactively prevent production outages.

Key Projects

Multi-Cluster Kubernetes Disaster Recovery & Scaling Platform
Technologies: Kubernetes, Docker, AWS, Terraform, CI/CD, Linux
- Deployed a fault-tolerant container orchestration platform across multiple AWS availability zones with automatic horizontal pod autoscaling (HPA).
- Automated disaster recovery failover routines, reducing Recovery Time Objective (RTO) from 4 hours to 8 minutes.
- Enforced zero-trust networking security policies and TLS termination across all internal service mesh communications.

Automated Cloud Migration & Compliance Framework
Technologies: AWS, Terraform, Ansible, Bash, IAM
- Successfully orchestrated the zero-downtime migration of on-premises legacy workloads into AWS EC2 and RDS environments.
- Implemented automated AWS Cost Explorer governance policies, optimizing reserved instance allocations to reduce monthly cloud expenditure by 28%.

Education

Bachelor of Science in Computer Engineering
California State University, Long Beach (2016 - 2020)
