Professional Summary
Detail-oriented and commercially driven Data Analyst with 3+ years of experience transforming complex multi-source datasets into strategic business intelligence and predictive models. Proven expertise in complex SQL database querying, statistical hypothesis testing in Python, automated ETL pipeline design, and interactive executive KPI dashboard development using Power BI and Tableau. Skilled in stakeholder communication, translating quantitative trends into actionable commercial decisions that maximize revenue growth and operational efficiency.

Technical Skills
SQL, Python, Excel, Pandas, NumPy, Power BI, Tableau, Data Visualization, Statistics, ETL, Data Cleaning, Data Modeling, A/B Testing, Business Intelligence, Matplotlib, Seaborn, Relational Databases, Regression Analysis

Work Experience
Senior Data Analyst - Retail Insights Corp (2022 - Present)
- Formulated complex SQL queries and window functions across relational databases comprising 20M+ records to evaluate customer retention cohorts, increasing customer lifetime value (LTV) by 16%.
- Designed and automated 12+ executive KPI dashboards in Power BI and Tableau utilized daily by C-suite executives for operational forecasting and inventory allocation.
- Led A/B testing experiments on dynamic promotional pricing algorithms, resulting in an annualized $420,000 increase in gross retail margin.
- Standardized data hygiene protocols across data warehouse pipelines, eliminating duplicate records and reducing reporting anomalies by 35%.

Data Analyst - FinMetrics Global (2021 - 2022)
- Built automated ETL data cleaning scripts using Python, Pandas, and NumPy, reducing manual data compilation time by 18 hours per business week.
- Performed statistical regression and cohort analysis to identify leading indicators of customer churn, presenting slide deck insights directly to divisional heads.
- Automated daily financial reconciliation reports in Excel using advanced VBA macros and Power Query connections.

Key Projects
Predictive Customer Churn & Lifetime Value Engine
Technologies: Python, SQL, Pandas, NumPy, Statistics, Scikit-learn
- Analyzed 850,000 customer transaction histories to train predictive logistic regression and random forest classification models.
- Identified high-risk attrition customer segments with 88% precision, enabling the retention marketing team to reduce churn by 14%.
- Published an interactive Tableau visualization portal communicating feature importance and risk distributions to non-technical business managers.

Omnichannel E-Commerce Conversion Optimization Dashboard
Technologies: Power BI, SQL, Data Modeling, Business Intelligence, Excel
- Centralized fragmented analytics across Google Analytics, internal ERP databases, and customer support ticketing into a unified star-schema data model.
- Identified multi-touch checkout funnel friction points, informing UX redesigns that boosted checkout conversion by 8.4%.

Education
Bachelor of Science in Statistics and Data Science (Magna Cum Laude)
University of Washington, Seattle (2017 - 2021)
